Compact analog RF fiber transceivers

Compact analog transceiver modules for RF distribution, radio links and fiber-optic microwave systems.

Representative series photograph. Packaging depends on configuration.

Technical specifications

RF band options	10-1200 MHz; 50-3000 MHz; 50-6000 MHz
Module format	Compact cast metal enclosure
Optical options	1310 nm and/or 1550 nm
Output control	Adjustable amplitude

Applications

RF distribution / Cellular and wireless test systems / Satellite ground systems

Selecting your configuration

Specify a complete transmitter/receiver pair, directionality, RF passband and optical budget. The catalogue band options are not one universal transceiver response.

Series options are not guaranteed combinations. Precisometer confirms the specifications, interfaces and availability of your selected configuration in a quotation.
