Dynamic fiber polarization controller

Real-time electronic adjustment of the polarization state in a fiber-optic system.

Representative series photograph. Packaging depends on configuration.

Technical specifications

Control	Dynamic real-time polarization adjustment
Format	Compact fiber-pigtailed controller
Optical design	Low insertion loss and polarization-dependent loss

Applications

Fiber lasers / Polarization scrambling / Optical communication and sensing

Selecting your configuration

Specify operating wavelength, tracking speed, control interface, fiber and connectors. Numerical loss and response-time limits are confirmed for the selected unit.

Series options are not guaranteed combinations. Precisometer confirms the specifications, interfaces and availability of your selected configuration in a quotation.
