Fiber-coupled narrowband filters

Thin-film fiber filters for selecting a spectral band and reducing unwanted light in optical systems.

Representative series photograph. Packaging depends on configuration.

Technical specifications

Filter technology	Thin-film interference filter
Wavelength	Specified for the application
Interface	Fiber-coupled

Applications

EDFA noise filtering / WDM and DWDM systems / Fiber lasers and sensors

Selecting your configuration

Specify centre wavelength, passband, out-of-band isolation, insertion loss, power and return loss. No universal passband width or power rating is implied.

Series options are not guaranteed combinations. Precisometer confirms the specifications, interfaces and availability of your selected configuration in a quotation.
