1-18 GHz microwave RF-over-fiber link

Analog optical transmission and reception modules for transporting microwave signals over fiber.

Representative series photograph. Packaging depends on configuration.

Technical specifications

Series RF coverage	1-18 GHz; sub-band options
Optical wavelength options	1310, 1550 nm; DWDM options
System elements	Analog optical transmitter and receiver

Applications

Remote antenna links / Telemetry / Microwave signal transport

Selecting your configuration

The series covers multiple RF sub-bands. Confirm the exact passband, optical budget, link length and gain-flatness requirements for the selected transmitter/receiver pair.

Series options are not guaranteed combinations. Precisometer confirms the specifications, interfaces and availability of your selected configuration in a quotation.
